

# HAMPTONS OWNERS ASSOCIATION

## HOW TO TURN IRRIGATION WATER OFF IN CASE OF EMERGENCY

In the event of a water leak, it is imperative that you familiarize yourself with your homes water main valves which are located on the side of your house. There are two valves, one that controls your irrigation water and one that controls the domestic water for your home.

As you are aware, the association's landscapers are not on-site 24/7, so in the event of an afterhours irrigation or sprinkler break, you will want to turn off your irrigation water main to prevent water waste.

### OLDER HOMES WATER MAIN VALVES STYLE

The top side valve turns off the water to the house.

The bottom valve turns off the water for the sprinklers/irrigation system.

### NEWER HOMES WATER MAIN VALVES STYLE

Turn black lever horizontally to turn off irrigation water main valve.

**IMPORTANT:** If you have turned off your irrigation water main valve due to an after-hours landscape emergency water leak, please immediately contact our office to let us know so we can contact the landscape contractors to fix the issue and get water turned back on.
